Dear Sir,

The PU Cattle Ranch has a well on the Moore Canal. The measuring device is a weir, which is located less than thirty feet from the well. From the weir, the water runs south to the Crossover, where it is measured again. It continues in to the Timber Dome Canal, south to the PU-Sorensen Ditch, where there is a weir to measure Mitchell Sorensen's water as well as the PU Ranch's. Then, it continues south where PU Ranch pulls it's water. There is a weir in place, but to my knowledge it is not level. It will be fixed and inspected by Doug Rosenkrance, Water Master of Big Lost River Irrigation District.

Sincerely,

Chris Lord, Foreman  
PU Cattle Ranch
